

Fully automated filling and assembling of materials, ranging from low to high viscosities, into bottles, cans or jars

volume

1ml – 1500ml

possible bulk material

adhesives, sealant, grease, colours (solvent or water based). We can handle low viscosity and high viscosity, pressure or moisture sensitive product as well due to our filling equipment. Out of barrels, IBC or bucket.

gassing

with N², Co² or other gas are possible.

material

glass, tinplate, plastics (HDPE, LPDE, PET...) or aluminium are possible as packaging material. We advise you to find the correct packaging to save your material as well as the environment.

shape of packaging

round, square or oval we adapting ourselves to your requirements.

closure

There are different kinds of closures possible, as they could be:

- child-resistant closures
- vaporizers
- brush-cap
- Trigger sprayer
- spray cap
- unique closing system
- swap

labelling

We can handle a huge range of different kind of labels: front and back, 360°Degree, bookletlabel, wrap-round-label, fanfold-label, or multilayerlabel on our machine. Another form of labeling could be sleeve label. Order-based data can be printed directly on the label or inline on the packaging itself.

secondary packaging

The filled packaging will be packed according to your requirements:

- Single pack
- set packaging with sleeve or in folding box
- loose in a corrugated box

capacity

the capacity for bottles, cans or jars is at around 200.000 per day.

On the basis of our machinery and the cooperation with HSV we can fill special formats without much effort.
